State and Local Cybersecurity Grant Program

United States Department of Homeland Security

The Department of Homeland Security will award $1 billion over four years to states and tribal governments to address cybersecurity risks to information systems owned or operated by, or on behalf of, state, local, or tribal governments. The application period for states and tribes is expected to open in Summer 2022.

- States and tribes must create Cybersecurity Plans to address cybersecurity threats to IT systems in their jurisdictions.

- A local government that receives a subgrant must follow its state's Cybersecurity Plan.

- Institutions of public education and public health will send representatives to states' Cybersecurity Planning Committees to decide how funds will be distributed.

Grants Development Consultants with the Carahsoft/IronNet Grants Support Program will work with you to evaluate your needs and determine the level of support that will maximize the funding you can obtain and optimize the technology you are able to purchase with the grant funds you receive.
